PRODUCT HIGHLIGHT

BEARING BUDDIES

BW Bearing Buddies play a crucial role in protecting the bearings on your trailer's axles. BW Bearing Buddies are designed to protect trailer bearings from water ingress and other outside elements by applying light pressure to the internal greased environment. BW supplies a full range of high-quality, corrosion-resistant bearing buddies for all common trailer hub sizes, keeping your trailer bearings water and contaminant free.

PRODUCT FEATURES & BENEFITS:

- Improves the lifespan of trailer bearings and ensures optimal bearing conditions.
- Protects trailer bearings from water, contaminants and corrosion.
- Made from high-quality materials.

TECH TIP

BEARING BUDDIES INSTALLATION

Before installing BW Bearing Buddies, make sure that the spindle seals are still in good condition and are seated correctly. If seals need to be replaced, make sure to replace the seals prior to installing BW Bearing Buddies.

When installing BW Bearing Buddies, make sure to fill the bearing buddy with a high quality grease. We recommend a NLGI Grade 2 grease. Try to avoid mixing greases where possible. When filling the BW Bearing Buddie, make sure not to overfill it with grease. Overfilling the BW Bearing Buddie can push the rear spindle seal out of position and push grease out, allowing water and contamination to enter through the back.

We recommend filling the BW Bearing Buddie until the spring is approximately half compressed.

WARRANTY: 2 years
