## PRODUCT HIGHLIGHT

# TIMING BELT KITS

BW offers timing belt kits with top-quality components from reputable manufacturers, ensuring compatibility with OEM standards. Kits include all necessary parts for replacement, simplifying maintenance. BW provides extensive coverage for the Australian and New Zealand markets.

### PRODUCT FEATURES & BENEFITS:

- Matches fit, form, and function of original equipment.
- Contains all components necessary for service/replacement including tensioners, pulleys, seals, and belts.
- Extensive catalogued coverage for the Australian and New Zealand market.

### TECH TIP

### 4D56 ENGINE ISSUES

The Mitsubishi 4D56 engine, known for reliability, faces issues with its balance shafts, critical for minimising vibrations. Problems reported include shaft resistance or seizing, leading to belt snapping and timing failure. Premature bearing failure within the shaft assembly is common due to factors like poor lubrication or material quality. Neglecting these issues can result in severe engine damage. Regular maintenance, including oil changes, inspections, and prompt repairs, is crucial for engine longevity and performance.

If any of these mechanical problems are left unaddressed, they can lead to severe engine damage and even engine failure. Timely inspections, prompt repairs, and adherence to manufacturer-recommended maintenance schedules are essential to ensure the longevity and performance of the Mitsubishi 4D56 engine.

**WARRANTY:** BW Timing Belt Kits are warranted for the recommended OE service interval
